

Petit Technical College 512 - 221 - 0654
In-Your-Shop Seminars and Certifications
Dan Petit - ASE Recertified L-1 Educator
364 shops served since April 2005

Our 2016 Seminars courses are on wide screen, and we have even more trade secrets for techs that are very funny and easy to learn. No phone use, recording, pictures, or re-teaching* allowed, because the vehicle faults call the curriculum.

***Attending constitutes non disclosure agreement.**

All Seminars are available in 10 week segments.

All Seminars start with Seminar Series #1.

All Seminar content is used to service vehicles.

80% of a shop's income is in hard parts. 20% of the rest comes from diagnostics done correctly. That 20% *not* done correctly, however, costs what net profit that was earned from the 80%.

Another 22% of deeper, yet easy, diagnostics income on top of the 100% comes from Series #1.

Seminar Series #1; Newprocess Instantaneous, This is a compilation of Trade Secret Formulas, is 16 hours, consisting of 8 2-hour classes, and live tests for case study verifications, as well as phone

assistance for complex sets of faults. Seminar Series #1 proves all the hidden things that always stop diagnostics.

Certification from completed labs is included.

Note: There is a \$200 Grant which can apply to any \$996 Seminar, so that it may cost only \$796.

Seminar Series #2; Genisys EVO Proficiency is 16 hours consisting of 2 3-hour Classes, 16 live vehicle scanner sessions for Normal & Abnormal Ranges in conjunction with symptoms.

The easy way to diagnose all vehicles with the same order used on at least 16 vehicles. During this time, the cost of the Seminar is recovered with identified work to do, in the correct work order. You are always right in the order of repairs, which is what the customer always wants. Your earnings are solidly justified, and customers are drawn to your services by your accuracy. \$996., less Grant = \$796.

Seminar Series #3 Tech Health Issues.

These seminars advise the technician regarding the adverse influences to technician health that are not in the public domain. Also, coverage relating to cumulative nutrition deficits, steady performance, concentration in bays, and how we use our minds. This series is based on what techs ask us, but not anyone else. No cost.

Seminar #4: Tech & Exec Individual Conference.
Know what not to buy for equipment, AND parts/parts quality. For new techs, how to avoid the trap of lifelong equipment debt.

Seminar Series #5 Everything A+L-1 ProofTrack finalizes the Tech's A+L-1 Certification, and is of varied length of between 10 and 12 scanning hours, depending both on cases of confirmed* effectiveness proven though at least 32 vehicular diagnostic events for 32 Credits. This has a wide variation but generally we do not expect more than 10 to 12 hours for most techs to complete a A+L-1 ProofTrack certifications with us. \$796.

Seminar Series #6; Certified Code Breaker
This Series teaches the tech how to break down the meanings of the engineering-cryptic Codes meant to prevent **DIY DAMAGES** in Warranty. This Series reveals the valid reasons why certain fault codes never set while the owner expects a single visit to execute problem solving. These reasons, although technically-valid, are the same causes of most frustration/imprecision of techs. \$996. less Grant = \$796 (in 4 payments.)

Seminar Series #7 is; GM Universal Diagnostics.
GM gives us **ALL PARAMETERS AT ONCE.** It's best seen with Genisys **EVO** as we see them interacting. **EVO** is critical to show **ALL OEM**

software adaptations in 5 graphing dimensions. You are easily shown how to relate to the physics of the several combined "root causes", to know exactly what is going on in all other OEM's also. \$888. less Grant = \$688. (in 2 pmts of \$344. ea.)

Seminar Series #8: Chevrolet Volt Systems

Introduction; This is a one-day introduction on a 2014 Chevrolet Volt. Seminar also covers the all electric drive Chevrolet Bolt. How these new technologies are made easy to understand for the experienced tech with the GM communications software already in the Genisys EVO. Limited to 3 techs per class day. (Includes lunch). \$448.

Seminar Series #9: Electronic Steering Safe

Service and as affected by any electrical work!!

This series covers fault diagnosis, root causes, and relearning to reinitialize the various electric steering systems. Seminar #1 prerequisite. \$988. Vehicle ID's & full test logs are mandatory here! This Series requires complete dedication by an accepted tech who has responsible thoroughness. Written test for certification. 90% score passes.

Petit Technical College is a Division of Petit Technical Services. To text: 512-221-0654 This dedicated number is only for techs/owners.
