

<b>Name of Regional System:</b>	
<b>Status:</b> Existing or Planned	
<b>Description of System:</b>	<u>1,000 characters or less</u>
(Include the following: Type of System (Conventional or Trunked), Frequency Band, P25 Compliance, Number of sites etc.)	

**Example:** The Greater Austin/Travis County Regional Radio System (GATRRS) shares its system controller with the newly-upgraded Williamson County 800 MHz trunked P25 system layer, a trunked VHF P25 system layer serving the Middle Rio Grande Valley, and a 700 MHz State Capitol site built by Texas DPS in Austin. The combined system layers serve more than 100 agencies and 15,000 users. Future projects will connect agency-owned systems in counties adjacent Austin/Travis County to the Austin/Travis Master Site controller, with the goal of creating a shared p25 standards-based system that covers the entire 10 county Capital Area Planning Council of Governments (CAPCOG) region. GATRRS is currently pursuing integrated voice and data to provide short text messaging and global positioning information over the voice radio system. GATRRS is currently collaborating with Harris County, LCRA, and the City of San Antonio to provide connectivity and interoperability from Houston, Galveston, San Antonio, and Corpus Christi back to Austin.
