Hazardous Weather

Strong southwest winds and dry fuels will lead to Critical Fire Weather Conditions today across southwest and south-central parts of the Texas Panhandle. Elevated Fire Weather Conditions are expected in adjacent areas. Be careful with sparks or flames.
West wind of 15 to 25 mph along with warm temperatures and low relative humidities will result in an elevated fire danger across all of the South Plains north of a Morton to Ralls line. Noon to 6 pm is the most likely time for conditions to be met.
A High Wind Warning is in effect for the Guadalupe Mountains this afternoon through this evening.

Dry and breezy conditions will result in elevated fire weather concerns this afternoon through early this evening across the mountains, upper Trans Pecos region of west Texas and the southeast New Mexico Plains.
The combination of strong winds, warm temperatures and low humidity will create critical fire conditions across southern New Mexico and west Texas on Thursday.

Windy... warm and dry on Thursday with west winds gusting around 40 mph. Blowing dust will reduce the visibility over a few locations.
