In accordance with the Texas Transportation Code, 522.0235(a), the Texas Department of Public Safety may provide for a waiver of the visual standards for a commercial driver license contained in 49 C.F.R., Part 391.41(b) (10). This waiver may be issued if the applicant is applying for or has been issued a commercial driver license and will be driving commercially within the State of Texas only. The Department of Public Safety will only issue a vision waiver if it finds such a waiver would likely achieve a level of safety that is equivalent to, or greater than, the level that would be achieved if such a waiver were not granted.

To qualify for a Texas Intrastate Vision Waiver, a driver must meet all other physical requirements set forth in 49 C.F.R., Part 391. The issuance of this waiver will allow an individual to apply for or renew a Texas Commercial Driver License to participate in the transport of material goods or passengers within the State of Texas only. This waiver is not a guarantee of employment. Motor carriers regulated by the U.S. Department of Transportation may require drivers to hold a current DOT Medical Card as a condition of employment. Holders of a Texas Intrastate Vision Waiver, who do not meet the physical requirements for a DOT Medical Card, may be legally denied employment.

Factors considered prior to the issuance of a waiver will be the driver’s experience level and motor vehicle driving record. In addition to the information required on the application form, an applicant’s driving history for the three-year period immediately preceding the application will be evaluated. In order for an applicant to qualify for a Texas Intrastate Vision Waiver, his/her driving record must contain:

1. No suspensions, revocations or cancellations of his/her driver license for the operation of any motor vehicle, including a personal vehicle.
2. No involvement in an accident for which he/she received a citation for a moving violation in any motor vehicle, including a personal vehicle.
3. No conviction for a disqualifying offense, as defined in 49 CFR 383.51(b)(2), or more than one serious traffic violation, as defined by 49 CFR, Part 385.5, while driving a commercial motor vehicle which disqualified or should have disqualified the applicant in accordance with the driver disqualification provisions of 49 CFR 383.51.
4. No more than two convictions for any moving violations or accident involvement in a commercial motor vehicle.

If an applicant is arrested, cited for or convicted of any disqualifying offense or other moving violation(s) during the time his/her application is pending, he/she must immediately report such arrests, citations or convictions to:

Texas Department of Public Safety
Issuance Services
Attention: CDL Section
P.O. Box 4087
Austin, Texas 78773-0320

No waiver decision will be made while any charge against the applicant for what would be a disqualifying offense is still pending. Convictions occurring during the processing of an application will be considered part of an applicant’s overall driving record. Applicants must also report any conviction that is not listed on the motor vehicle history because of processing delays.

To issue a Texas Intrastate Vision Waiver, the Department of Public Safety must receive the following documents:

1. A Texas Intrastate Vision Waiver Application form completed by the applicant.
2. A Driver License Office Vision Examination form completed by Department of Public Safety driver license office personnel.
3. The Medical Examination Report form completed by a licensed medical examiner.

The CDL Section of the Department of Public Safety must receive vision/physical examination results within 45 days of the date of the exam. Incomplete documents will be returned to the applicant for completion. Completed Texas Intrastate Vision Waivers may be faxed, emailed or mailed to the Department of Public Safety.

Mail: Texas Department of Public Safety
Issuance Services
Attention: CDL Section
P.O. Box 4087
Austin, Texas 78773-0320

Fax: (512) 424-2002
Email: TexasCDL@DPS.TEXAS.GOV (PDF format only)
IF YOUR VISION WAIVER IS APPROVED, VISION WAIVERS ARE VALID FOR TWO (2) YEARS FROM THE EXAMINATION DATE, UNLESS THE MEDICAL EXAMINER SPECIFIES A SHORTER PERIOD. WAIVER RECIPIENTS MUST HAVE THE 'K' (CDL-INTRASTATE COMMERCE ONLY) AND 'Y' (VALID TEXAS VISION WAIVER REQUIRED) RESTRICTIONS ADDED TO THEIR LICENSE. IF CORRECTIVE LENSES ARE REQUIRED TO MEET TEXAS VISION WAIVER CRITERIUM, THE 'A' RESTRICTION (CORRECTIVE LENSES) WILL BE ADDED AS WELL.

IF YOU HAVE ANY QUESTIONS REGARDING THE WAIVER APPLICATION PROCESS, PLEASE CONTACT THE CUSTOMER SERVICE CENTER AT (512) 424-2600 AND SELECT ‘DRIVER LICENSE INFORMATION’.

IF THIS APPLICATION PACKET IS NOT COMPLETED IN FULL AND RETURNED TO THIS OFFICE WITHIN 45 DAYS OF THE PHYSICAL EXAMINATION DATE, YOUR REQUEST FOR A VISION WAIVER MAY BE DENIED.
THE DRIVER’S ROLE
Responsibilities, work schedules, physical and emotional demands, and lifestyles among commercial drivers vary by the type of driving that they do. Some of the main types of drivers include the following: turn- around or short relay (drivers return to their home base each evening); long relay (drivers drive 8-10 hours and then have an 8-hour off-duty period); straight through haul (cross country drivers); and team drivers (drivers share the driving by alternating their 4-hour driving periods and 4-hour rest periods). The following factors may be involved in a driver’s performance of duties: abrupt schedule changes and rotating work schedules which may result in irregular sleep patterns and a driver beginning a trip in a fatigued condition; long hours; extended time away from family and friends which may result in lack of social support; tight pickup and delivery schedules, with irregularity in work, rest, and eating patterns, adverse road, weather and traffic conditions, which may cause delays and lead to hurriedly loading or unloading cargo in order to compensate for the lost time; and environmental conditions such as excessive vibration, noise, and extremes in temperature. Transporting passengers or hazardous materials may add to the demands on the commercial driver.

There may be duties in addition to the driving task for which a driver is responsible and needs to be fit. Some of these responsibilities are: coupling and uncoupling trailer(s) from the tractor, loading and unloading trailer(s) (sometimes a driver may lift a heavy load or unload as much as 50,000 pounds of freight after sitting for a long period of time without any stretching period); inspecting the operating condition of tractor and trailer(s) before, during and after delivery of cargo; lifting, installing and removing heavy tire chains; and lifting heavy tarpaulins to cover open top trailers. These tasks demand agility, the ability to bend and stoop, the ability to maintain a crouching position, frequent entry and exit of the cab and the ability to climb ladders on the tractor and/or trailer(s). In addition, a driver must have the perceptual skills to monitor a sometimes-complex driving situation, the judgment skills to make quick decisions when necessary, and the manipulative skills to control an oversize steering wheel, shift gears using a manual transmission and maneuver a vehicle in crowded areas.

49 CFR 391.41 PHYSICAL QUALIFICATIONS FOR DRIVERS

(a) A person shall not drive a commercial motor vehicle unless he/she is physically qualified to do so and, except in 391.67, has on his person the original, or a photographic copy of a medical examiner’s certificate that he/she is physically qualified to drive a commercial motor vehicle.

(b) A person is physically qualified to drive a motor vehicle if that person:

1. Has no loss of foot, a leg, a hand or an arm, or has been granted a Skill Performance Evaluation Certificate (formerly Limb Waiver) pursuant to 391.49;
2. Has no impairment of a hand or finger which interferes withprehension or power grasping; an arm, foot or leg which interferes with the ability to perform normal tasks associated with operating a commercial motor vehicle; or any other significant limb defect or limitation which interferes with the ability to perform normal tasks associated with operating a commercial motor vehicle; or has been granted a SPE Certificate pursuant to 391.49;
3. Has no established medical history or clinical diagnoses of diabetes mellitus currently requiring insulin for control;
4. Has no current clinical diagnosis of myocardial infarction, angina pectoris, coronary insufficiency, thrombosis, or any other cardiovascular disease of a variety known to be accompanied by syncope, dyspnea, collapse or congestive heart failure;
5. Has no established medical history or clinical diagnosis of a respiratory dysfunction likely to interfere with his/her ability to control and drive a commercial motor vehicle;
6. Has no current clinical diagnosis of high blood pressure likely to interfere with his/her ability to operate a commercial motor vehicle safely;
7. Has no established medical history or clinical diagnoses of rheumatic, arthritic orthopedic, muscular, neuromuscular of vascular disease that interferes with his/her ability to control and operate a commercial motor vehicle safely;
8. Has no established medical history or clinical diagnosis of epilepsy or any condition which is likely to cause loss of consciousness or any loss of ability to control a commercial motor vehicle;
9. Has no mental, nervous, organic or functional disease or psychiatric disorder likely to interfere with his/her ability to drive a commercial motor vehicle safely;
10. Has distant visual acuity of a least 20/30 (Snellen) in each eye without corrective lenses or visual acuity separately corrected to 20/40 (Snellen) or better with corrective lenses, distant binocular acuity of at least 20/40 (Snellen) in both eyes with or without corrective lenses, field of vision of at least 70 degrees in the horizontal meridian in each eye, and the ability to recognize the colors of traffic signals and devices showing standard red, green and amber;
11. First perceives a forced whispered voice in the better ear not less than 5 feet with or without the use of a hearing aid, or, if tested by use of an audiometric device, does not have an average hearing loss in the better ear greater than 40 decibels at 500 Hz, 1,000 Hz and 2,000 Hz with or without a hearing aid when the audiometric device is calibrated to American National Standard (formerly ASA Standard) Z24.5-1951;
12. Does not use a controlled substance identified in 21 CFR 1308.11 Schedule 1, an amphetamine, a narcotic or any other habit-forming drug; (A driver may use such a substance or drug, if the substance or drug is prescribed by a licensed medical practitioner who is familiar with the driver’s medical history and assigned duties and has advised the driver that the prescribed substance or drug will not adversely affect the driver’s ability to safely operate a commercial motor vehicle); and
13. Has no current clinical diagnosis of alcoholism.

**Renewal**  
Current Waiver Expires: ________________

**New Application**

I hereby certify that if I am arrested, cited for or convicted of any disqualifying offense or other moving violation during the period my vision waiver application is pending, I will immediately report such arrests, citations or convictions to the Texas Department of Public Safety. I understand that a vision waiver granted under Title 37, Texas Administrative Code, Section 16.9 does not exempt me from meeting all other driver qualifications required under the Federal Motor Carrier Regulations, Part 391.41.

I do solemnly swear or affirm that I am the person named and described herein and that this affidavit is true and correct. Making a false statement under oath may subject the maker of the statement to perjury charges pursuant to Section 37.02 of the Penal Code.

Signature of Applicant

If the applicant disputes the results of the Snellen examination, he/she should be instructed to have a more detailed examination performed by a vision specialist. A CDL will not be issued or renewed if the applicant cannot meet the vision standards specified in 49 CFR, Part 391.41(b)(10). A driver wishing to renew a CDL must downgrade to a non-CDL license and complete application for a Texas Intrastate Vision Waiver. A driver who operates a motor vehicle in intrastate commerce, not transporting property requiring a hazardous material placard, and was regularly employed prior to August 28, 1989, is not required to meet the medical standards set forth in the Federal Motor Carrier Safety Regulations.

INSTRUCTIONS TO THE MEDICAL EXAMINER

General Information

The purpose of this examination is to determine a driver's physical qualification to operate a commercial motor vehicle in intrastate commerce. The requirements for operation of a commercial motor vehicle within the State of Texas are those specified in 49 CFR, 391.41-49, (with the exception of the applicable Texas Intrastate Vision and Limb waivers). Therefore, the medical examiner must be knowledgeable of these requirements and guidelines developed by the Federal Motor Carrier Safety Administration (FMCSA), to assist in making the qualification determination. The medical examiner should be familiar with the driver’s responsibilities and work environment. In addition to reviewing the Health History section with the driver and conducting the physical examination, the medical examiner should discuss common prescriptions and over-the-counter medications relative to the side effects and hazards of these medications while driving, as well as educating the driver to read warning labels on all medications. History of certain conditions may be cause for rejection, particularly if required by regulation, or may indicate the need for additional laboratory tests or more stringent examination, perhaps by a medical specialist. These decisions are usually made by the medical examiner in light of the driver’s job responsibilities, work schedule and potential for the condition to render the driver unsafe.

Medical conditions should be recorded even if they are not cause for denial, and they should be discussed with the driver to encourage appropriate remedial care. This advice is especially needed when a condition, if neglected, could develop into a serious illness that could affect driving.

If the medical examiner determines that the driver is fit to drive and is able to perform non-driving responsibilities as may be required, the medical examiner signs the medical certificate that the driver must carry with his/her driver license. The certificate must be dated. Under current regulations, the certificate is valid for two years unless the driver has a medical condition that does not prohibit driving but does require more frequent monitoring. In such situations, the medical certificate should be issued for a shorter length of time. The physical examination should be done carefully and at least as complete as the attached forms indicate.

Interpretation of Medical Standards

Since the issuance of the regulations for physical qualifications of commercial drivers, the FMCSA has published recommendations called Advisory Criteria to help medical examiners in determining whether a driver meets the physical qualifications for commercial driving. These recommendations have been condensed to provide information to medical examiners that is directly relevant to the physical examination and is not already included in the medical examination form. The specific regulation is printed in italics and its reference by section is highlighted:

FMCSA Advisory Criteria

Loss of Limb:
391.41(b)(1)

A person is physically qualified to drive a commercial motor vehicle if that person:

*Has no loss of a foot, leg, hand or an arm, or has been granted a Skill Performance Evaluation (SPE) Certificate pursuant to Section 391.49, or a Texas Intrastate Limb Waiver.*

Limb Impairment:
391.41(b)(2)

A person is physically qualified to drive a commercial motor vehicle if that person:

*Has no impairment of: (i) a hand or finger which interferes with prehension or power grasping; or (ii) an arm, foot or leg which interferes with the ability to perform normal tasks associated with operating a commercial motor vehicle; or (iii) any other significant limb defect or limitation which interferes with the ability to perform normal tasks associated with operating a commercial motor vehicle; or (iv) has been granted a Skill Performance Evaluation Certificate pursuant to Section 391.49, or a Texas Intrastate Limb Waiver.*

A person who suffers loss of a foot, leg, hand or arm or whose limb impairment in any way interferes with the safe performance of normal tasks associated with operating a commercial motor vehicle is subject to the Skill Performance Evaluation Certification Program pursuant to section 391.49, or a Texas Intrastate Limb Waiver, assuming the person is otherwise qualified.

With the advancement of technology, medical aids and equipment modifications have been developed to compensate for certain disabilities. The SPE Certification Program and Texas Intrastate Limb Waiver program was designed to allow persons with the loss of a foot or limb or with functional impairment to qualify under the Federal Motor Carrier Safety Regulations by use of prosthetic devices or equipment modifications, which enable them to safely operate a commercial motor vehicle. Since there are no medical aids equivalent to the original body or limb, certain risks are still present, and thus restrictions may be included on individual SPE (Limb Waiver) certificates when determined they are necessary to be consistent with safety and public interest.

If the driver is found otherwise medically qualified, the medical examiner must check on the medical certificate that the driver is qualified only if accompanied by a SPE (Limb Waiver) certificate. The driver and the employing motor carrier are subject to appropriate penalty if the driver operates a motor vehicle without a current SPE (Limb Waiver) certificate for his/her physical disability.

Continued on next page
Diabetes:
391.41(b)(3)

A person is physically qualified to drive a commercial motor vehicle if that person:

\textit{Has no established medical history or clinical diagnosis of diabetes mellitus currently requiring insulin for control.}

Diabetes mellitus is a disease, which, on occasion, can result in a loss of consciousness or disorientation in time and space. Individuals who require insulin for control have conditions that can get out of control by the use of too much or too little insulin, or food intake not consistent with the insulin dosage. Incapacitation may occur from symptoms of hyperglycemic reactions, including drowsiness, semi consciousness, diabetic coma or insulin shock.

The administration of insulin is within itself a complicated process requiring insulin, syringe, needle, alcohol sponge and a sterile technique. Factors related to long-haul commercial motor vehicle operations such as fatigue, lack of sleep, poor diet, emotional conditions, stress and concomitant illness, compound the diabetic problem. Thus, because of these inherent dangers, the FMCSA has consistently held that a diabetic who uses insulin for control does not meet the minimum physical requirements of the Federal Motor Carrier Safety Regulations.

Hypoglycemic drugs taken orally are sometimes prescribed for diabetic individuals to help stimulate natural body production of insulin. If the condition can be controlled by the use of oral medication and diet, then an individual may be qualified under the present rule.

Cardiovascular Condition:
391.41(b)(4)

A person is physically qualified to drive a commercial motor vehicle if that person:

\textit{Has no clinical diagnosis of myocardial infarction, angina pectoris, coronary insufficiency, thrombosis or any other cardiovascular disease of a variety known to be accompanied by syncope, dyspnea, collapse or congestive cardiac failure.}

The phrase "has no current clinical diagnosis of" is specifically designed to encompass:

1. a current cardiovascular condition, or
2. a cardiovascular condition which has not fully stabilized regardless of the time limit. The phrase “\textit{know to be accompanied by}” is defined to include: a \textit{clinical diagnosis} of a cardiovascular disease,
   1. which is accompanied by symptoms of syncope, dyspnea, collapse or congestive cardiac failure, and/or;
   2. which is likely to cause syncope, dyspnea, collapse or congestive cardiac failure.

It is the intent of the FMCSRs to render unqualified, a driver who has a current cardiovascular disease which is accompanied by and/or likely to cause symptoms of syncope, dyspnea, collapse, or congestive cardiac failure. However, the subjective decision of whether the nature and severity of an individual's condition will likely cause symptoms of cardiovascular insufficiency is on an individual basis and qualification rests with the medical examiner and the motor carrier. In those cases where there is an occurrence of cardiovascular insufficiency (myocardial infarction, thrombosis, etc.), it is suggested before a driver is certified that he or she have a normal resting and stress electrocardiogram (ECG), no residual complications and no physical limitations, and is taking no medication likely to interfere with safe driving.

Coronary artery bypass surgery and pacemaker implantation are remedial procedures and thus, not disqualifying. Coumadin is a medical treatment that can improve the health and safety of the driver and should not, by its use, medically disqualify the commercial driver. The emphasis should be on the underlying medical condition(s) that require treatment and the general health of the driver.

Respiratory Dysfunction:
391.41(b)(5)

A person is physically qualified to drive a commercial motor vehicle if that person:

\textit{Has no established medical history or clinical diagnosis of a respiratory dysfunction likely to interfere with ability to control and drive a commercial motor vehicle safely.}

Since a driver must be alert at all times, any change in his or her mental state is in direct conflict with highway safety. Even the slightest impairment in respiratory function under emergency conditions, when greater oxygen supply is necessary for performance, may be detrimental to safe driving.

There are many conditions that interfere with oxygen exchange and may result in incapacitation, including emphysema, chronic asthma, carcinoma, tuberculosis, chronic bronchitis and sleep apnea. If the medical examiner detects a respiratory dysfunction, that in any way is likely to interfere with the driver's ability to safely control and drive a commercial motor vehicle, the driver must be referred to a specialist for further evaluation and therapy. Anticoagulation therapy for deep vein thrombosis and/or pulmonary thromboembolism is not disqualifying once optimum dose is achieved, provided lower extremity venous examinations remain normal and the treating physician gives a favorable recommendation.

Continued on next page
Hypertension: 391.41(b)(6)

A person is physically qualified to drive a commercial motor vehicle if that person:

Has no current clinical diagnosis of high blood pressure likely to interfere with ability to operate a commercial motor vehicle safely.

Hypertension alone is unlikely to cause sudden collapse; however, the likelihood increases when target organ damage, particularly cerebral vascular disease, is present.

A blood pressure of 161-180 systolic and/or 91-104 diastolic is considered mild hypertension, and the driver is not necessarily unqualified during evaluation and institution of treatment. The driver is given a three-month period to reduce his or her blood pressure to less than or equal to 160/90; the certifying physician should state on the medical certificate that it is only valid for that three-month period. If the driver is subsequently found qualified with a blood pressure less than or equal to 160/90, the certifying physician may issue a medical certificate for a one-year period, but should confirm blood pressure control in the third month of this one-year period. The individual should be certified annually thereafter.

A blood pressure greater than 180 systolic and/or greater than 104 diastolic is considered moderate to severe. The driver shall not be qualified, even temporarily, until his or her blood pressure has been reduced to less than 181/105. The examining physician may temporarily certify the individual once the individual's blood pressure is below 181 and/or 105. For blood pressure greater than 180 and/or 104, documentation of continued control should be made every six months. The individual should be certified biannually thereafter. The expiration date must be stated on the medical certificate. Commercial drivers who present for certification with normal blood pressure but are taking medication(s) for hypertension should be certified on the same basis as individuals who present with blood pressures in the mild or moderate to severe range. Annual recertification is recommended if the medical examiner is unable to establish blood pressure at the time of diagnosis.

An elevated blood pressure finding should be confirmed by at least two subsequent measurements on different days. Inquiry should be made regarding smoking, cardiovascular disease in relatives and immoderate use of alcohol. An electrocardiogram (ECG) and blood provide including glucose, cholesterol, HDL cholesterol, creatinine and potassium should be made. An echocardiogram and chest X-ray are desirable in subjects with moderate or severe hypertension. Since the presence of target organ damage increases the risk of sudden collapse, group 3 or 4 hypertensive diabetic patients should be annually evaluated for target organ damage. The presence of target organ damage increases the risk of sudden collapse.

Treatment includes non-pharmacologic and pharmacologic modalities as well as counseling to reduce other risk factors. Most anti-hypertensive medications also have side effects, the importance of which must be judged on an individual basis. Individuals must be alerted to the hazards of these medications while driving. Side effects of somnolence or syncope are particularly undesirable in commercial drivers.

A commercial driver who has normal blood pressure three or more months after a successful operation for pheochromocytoma, primary aldosteronism (unless bilateral adrenalectomy has been performed), renovascular disease or unilateral renal parenchymal disease, and who shows no evidence of target organ damage may be qualified. Hypertension that persists despite surgical intervention with no target organ damage should be evaluated and treated following the guidelines set forth above.

Rheumatic, Arthritic Orthopedic, Muscular, Neuromuscular or Vascular Disease: 391.41(b)(7)

A person is physically qualified to drive a commercial motor vehicle if that person:

Has no established medical history or clinical diagnosis of rheumatic, arthritic orthopedic, muscular, neuromuscular or vascular disease that interferes with their ability to control and operate a commercial motor vehicle safely.

Certain diseases are known to have acute episodes of transient muscle weakness, poor muscular coordination (ataxia), abnormal sensations (paresthesia), decreased muscular tone (hypotonia), visual disturbances and pain that may be suddenly incapacitating. With each recurring episode, these symptoms may become more pronounced and remain for longer periods. Other diseases have more insidious onsets and display symptoms of muscle wasting (atrophy), swelling and paresthesia which may not suddenly incapacitate a person but may restrict his/her movements and eventually interfere with the ability to safely operate a motor vehicle. In many instances, these diseases are degenerative in nature or may result in deterioration of the involved area.

Once the individual has been diagnosed as having a rheumatic, arthritic orthopedic, muscular, neuromuscular or vascular disease, then he/she has an established history of that disease. The physician when examining an individual should consider the following:

the nature and severity of the individual's condition (such as sensory loss or loss of strength);
the degree of limitation present (such as range of motion);
the likelihood of progressive limitation (not always present initially but may manifest itself over time); and
the likelihood of sudden incapacitation.

If severe functional impairment exists, the driver does not qualify. In cases where more frequent monitoring is required, a certificate for a shorter time may be issued.

Continued on next page
Epilepsy:
391.41(b)(8)

A person is physically qualified to drive a commercial motor vehicle if that person:

*Has no established medical history or clinical diagnosis of epilepsy or any other condition that is likely to cause loss of consciousness or any loss of ability to control a motor vehicle.*

Epilepsy is a chronic functional disease characterized by seizures or episodes that occur without warning, resulting in loss of voluntary control, which may lead to loss of consciousness and/or seizures. Therefore, the following drivers cannot be qualified:

- a driver who has a medical history of epilepsy;
- a driver who has a current clinical diagnosis of epilepsy; or
- a driver who is taking anti-seizure medication.

If an individual has had a sudden episode of a non-epileptic seizure or loss of consciousness of unknown cause that did not require anti-seizure medication, the decision as to whether that person's condition will likely cause loss of consciousness or loss of ability to control a motor vehicle is made on an individual basis by the medical examiner in consultation with the treating physician. Before certification is considered, it is suggested that a six-month waiting period elapse from the time of the episode. Following the waiting period, it is suggested that the individual have a complete neurological examination. If the results of the examination are negative and anti-seizure medication is not required, then the driver may be qualified.

In those individual cases where a driver has a seizure or an episode of loss of consciousness that resulted from a known medical condition (e.g., drug reaction, high temperature, acute infectious disease, dehydration or acute metabolic disturbance), certification should be deferred until the driver has fully recovered from that condition and has no existing residual complications, and is not taking anti-seizure medication.

Mental Disorders:
391.41(b)(9)

A person is physically qualified to operate a commercial motor vehicle if that person:

*Has no mental, nervous, organic or functional disease or psychiatric disorder likely to interfere with ability to drive a motor vehicle safely.*

Emotional or adjustment problems contribute directly to an individual's level of memory, reasoning, attention and judgment. These problems often underlie physical disorders. A variety of functional disorders can cause drowsiness, dizziness, confusion, weakness or paralysis that may lead to loss of coordination, inattention, loss of functional control and susceptibility to accidents while driving. Physical fatigue, headache, impaired coordination, recurring physical ailments and chronic "nagging" pain may be present to such a degree that certification for commercial driving may be inadvisable. Somatic and psychosomatic complaints should be thoroughly examined when determining an individual's overall fitness to drive. Disorders of a periodically incapacitating nature, even in the early stages of development, may warrant disqualification.

Many bus and truck drivers have documented that "nervous trouble" related to neurotic, personality, emotional or adjustment problems is responsible for a significant fraction of their preventable accidents. The degree to which an individual is able to appreciate, evaluate and adequately respond to environmental strain and emotional stress is critical when assessing an individual's mental alertness and flexibility to cope with the stresses of commercial motor vehicle driving.

When examining the driver, it should be kept in mind that individuals who live under chronic emotional upsets may have deeply ingrained maladaptive or erratic behavior patterns. Excessively antagonistic, instinctive, impulsive, openly aggressive, paranoid or severely depressed behavior greatly interfere with the driver's ability to drive safely. Those individuals who are highly susceptible to frequent states of emotional instability (schizophrenia, affective psychoses and paranoia, anxiety or depressive neuroses) may warrant disqualification. Careful consideration should be given to the side effects and interactions of medications in the overall qualification determination.

Vision:
391.41(b)(10)

A person is physically qualified to drive a commercial motor vehicle if that person:

*Has distant visual acuity of at least 20/40 (Snellen) in each eye with or without corrective lenses or visual acuity separately corrected to 20/40 (Snellen) or better with corrective lenses, distant binocular acuity of at least 20/40 (Snellen) in both eyes with or without corrective lenses, field of vision of at least 70 degrees in the horizontal meridian in each eye, and the ability to recognize the colors of traffic signals and devices showing standard red, green and amber.*

The phrase "ability to recognize the colors of" is interpreted to mean if a person can recognize and distinguish among traffic control signals and devices showing standard red, green and amber, he or she meets the minimum standard, even though he or she may have some type of color perception deficiency. If certain color perception tests are administered, (such as Ishihara, Pseudoisochromatic, Yarn) and doubtful findings are discovered, a controlled test using signal red, green and amber may be employed to determine the driver's ability to recognize these colors.
Contact lenses are permissible if there is sufficient evidence to indicate that the driver has good tolerance and is well adapted to their use. (Use of a contact lens in one eye for distance visual acuity and another lens in the other eye for near vision is not acceptable, nor are telescopic lenses acceptable for the driving of commercial motor vehicles.)

If an individual meets the criteria by the use of an approved type of glasses or contact lenses, the following statement shall appear on the Medical Examiner's Certificate: "Qualified only if wearing corrective lenses".

**Hearing:**

391.41(b)(11)

A person is physically qualified to drive a commercial motor vehicle if that person:

*First perceives a forced whispered voice in the better ear at not less than five feet with or without the use of a hearing aid, or, if tested by use of an audiometric device, does not have an average hearing loss in the better ear greater than 40 decibels at 500 Hz, 1,000 Hz, and 2,000 Hz with or without a hearing aid when the audiometric device is calibrated to American National Standard (formerly ASA Standard) Z22.4-1951.*

Since the prescribed standard under the FMCSRs is the American Standards Association (ANSI), it may be necessary to convert the audiometric results from the ISO standard to the ANSI standard. Instructions are included on the Medical Examination report form.

If an individual meets the criteria by using a hearing aid, the driver must wear that hearing aid and have it in operation at all times when driving. Also, the driver must be in possession of a spare power source for the hearing aid.

For the whispered voice test, the individual should be stationed at least five feet from the examiner with the ear being tested turned toward the examiner. The other ear is covered. Using the breath, which remains after a normal expiration, the examiner whispers words or random numbers such as 66, 18, 23, etc. The examiner should not use only sibilants (s-sounding test materials). The opposite ear should be tested in the same manner. If the individual fails the whispered voice test, the audiometric test should be administered.

If an individual meets the criteria by the use of a hearing aid, the following statement must appear on the Medical Examiner's Certificate: "Qualified only when wearing a hearing aid".

**Drug Use:**

391.41(b)(12)

A person is physically qualified to drive a commercial motor vehicle if that person:

*Does not use a controlled substance identified in 21 CFR 1308.II, Schedule I, an amphetamine, a narcotic or any other habit-forming drug. (A driver may use such a substance or drug, if the substance or drug is prescribed by a licensed medical practitioner who is familiar with the driver’s medical history and assigned duties and has advised the driver that the prescribed substance or drug will not adversely affect the driver’s ability to safely operate a commercial motor vehicle.) This exception does not apply to methadone.*

A test for controlled substances is not required as part of this biennial certification process. The term "uses" is designed to encompass instances of prohibited drug use determined by a physician through established medical means. This may or may not involve body fluid testing. If body fluid testing takes place, positive test results should be confirmed by a second test of greater specificity. The term "habit-forming" is intended to include any drug or medication generally recognized as capable of becoming habitual, and which may impair the user's ability to operate a commercial motor vehicle safely.

The driver is medically disqualified for the duration of the prohibited drug(s) use and until a second examination shows the driver is free from the drug. Recertification may involve a substance abuse evaluation, the successful completion of a drug rehabilitation program and a negative drug test result. Additionally, given that the certification period is normally two years, the examiner has the option to certify for a period of less than 2 years if this examiner determines more frequent monitoring is required.

**Alcoholism:**

391.41(b)(13)

A person is physically qualified to drive a commercial motor vehicle if that person:

*Has no current clinical diagnosis of alcoholism.*

If an individual displays signs of an alcohol-use problem, he or she should be referred to a specialist. After counseling and/or treatment, he or she may be considered for certification.
# Medical Examination Report

## For Commercial Drivers

### 1. Driver's Information

<table>
<thead>
<tr>
<th>Driver's Name: Last, First, Middle</th>

### 2. Health History

**See Instructions to the Medical Examiner for guidance.**

| Yes | No | Injury or Illness in the past 5 years? | Head or spinal cord injuries | Seizures, convulsions or fainting spells | Vision impairment (other than corrective lenses) | Hearing disorder, hearing loss, balance loss | Heart attack, cardiovascular disease | Heart surgery (valve replacement, bypass, angioplasty, etc.) | Hypertension | Muscular disease | Shortness of breath | Lung disease, emphysema, asthma | Kidney disease | Liver disease | Gastrointestinal disease | Diabetes or elevated blood sugar | Diet | Oral medication | Insulin injection | Nervous or psychiatric disorders | Sleep disorders, insomnia, sleep apnea, etc. | Stroke or paralysis | Missing or impaired limb | Spinal injury or disease | Chronic low back pain | Sexually transmitted disease | Regular, frequent alcohol use | Narcotic or habit forming drug use | Other |
|-----|----|-------------------------------------|------------------------------|------------------------------------------|-----------------------------------------------|-----------------------------------------------|---------------------------------------|---------------------------------------------|-----------------|-----------------|---------------------|-----------------------------------|-----------------|-----------------|------------------------|-----------------------------|-------|-----------------|--------------------|-------------------------------|------------------|---------------------|------------------------|---------------------------------|-------|
| ☐   | ☐  | ☐                                  | ☐                            | ☐                                        | ☐                                             | ☐                                             | ☐                                     | ☐                                            | ☐                | ☐                | ☐                   | ☐                                 | ☐                | ☐                | ☐                      | ☐                           | ☐     | ☐                | ☐                   | ☐                             | ☐                | ☐                   | ☐                      | ☐                             | ☐     |

The medical examiner must review and discuss any 'yes' answers with the driver including potential impact of medications on driving ability.
3. VISION

Standard: At least 20/40 acuity (Snellen) in each eye with or without correction. At least 70 degrees peripheral in horizontal meridian measured in each eye. The use of corrective lenses should be noted on the Medical Examiner’s Certificate.

**INSTRUCTIONS:** When other than the Snellen chart is used, give test results in Snellen—comparable values. In recording distant vision, use 20 feet as normal. Report visual acuity as a ratio with 20 as numerator and the smallest type read at 20 feet as denominator. If the applicant wears corrective lenses, these should be worn while visual acuity is being tested. If the driver habitually wears contact lenses, or intends to do so while driving, sufficient evidence of good tolerance and adaptation to their use must be obvious. **Monocular drivers must be able to demonstrate 20/25 or better distant visual acuity without corrective lenses or 20/40 or better distant visual acuity with corrective lenses in the good eye.** If the use of telescopic lenses is required to meet visual acuity standards, a comprehensive driving examination is required.

</thead>
</table>

4. HEARING

Standard: a) Must first perceive forced whispered voice ≥ 5 ft., with or without hearing aid, or b) average hearing loss in better ear ≤ 40dB.

☐ Check if hearing aid used for tests. ☐ Check if hearing aid required to meet standard.

**INSTRUCTIONS:** To convert audiometric test results from ISO to ANSI, --14dB from ISO for 500 Hz, --10 dB for 1,000 Hz, --8.5 dB for 2,000 Hz. To average, add the readings for three frequencies and divide by three.

<tbody>
<tr>
<td>If 161-180 and/or 91-104, qualify for 3 months only.</td>
<td>If ≤ 160 and/or 90, qualify for 1 yr. Document Rx &amp; control the third month.</td>
<td>Annually if acceptable BP is maintained.</td>
</tr>
<tr>
<td>If &gt; 180 and/or 104, not qualified until reduced to &lt; 181/105. Then qualify for 3 months only.</td>
<td>If ≤ 160 and/or 90, qualify for 6 months. Document Rx and control the third month.</td>
<td>Biannually</td>
</tr>
</tbody>
</table>

Medical Examiner should take at least two (2) readings to confirm blood pressure.

CDL-36 (rev. 10/2020)
6. LABORATORY AND OTHER TEST FINDINGS

Numerical readings must be recorded.

Urinalysis is required. Protein, blood or sugar in the urine may be an indication for further testing to rule out any underlying medical problem.

<table>
<thead>

7. PHYSICAL EXAMINATION

Height: _______ (in.)  Weight: _______ (lbs.)

The presence of a certain condition may not necessarily disqualify a driver, particularly if the condition is controlled adequately, is not likely to worsen or is readily amenable to treatment. Even if a condition does not disqualify a driver, the medical examiner may consider deferring the driver temporarily. Also, the driver should be advised to take the necessary steps to correct the condition as soon as possible particularly if the condition, if neglected, could result in more serious illness that might affect driving.

Check YES if there are any abnormalities. Check NO if the body system is normal. Discuss any YES answers in detail in the space on the last page and indicate before each comment. If organic disease is present, note that it has been compensated for.

See Instructions to the Medical Examiner for guidance.
