The purpose of this study is to perform an analysis of traffic stop data, by race and ethnicity, collected by the Texas Department of Public Safety (TX DPS). According to the Texas Code of Criminal Procedure, “racial profiling means a law enforcement-initiated action based on an individual's race, ethnicity, or national origin rather than on the individual's behavior or on information identifying the individual as having engaged in criminal activity.”¹

Scope of Work and Methodology

This section reviews each research task specified in the project scope of work, discusses the methodology utilized to address each research task, and identifies where within the report each item is covered. For items in the project scope of work that do not appear in the report, an explanation for each is provided.

Research Task #1

Determine if racial/ethnic disparities exist in the traffic stops at a statewide, regional, and district level

Subtasks

- Examine the traffic stop data by service, Highway Patrol (HP) and Commercial Vehicle Enforcement (CVE) separately at the statewide, regional, and district level.
- Traffic stop data that is examined should include trooper-initiated enforcement. Data from crash investigations, agency assists, and commercial vehicle static inspection stations should be excluded.
- Commercial vehicle enforcement inspections as a result of a traffic stop (such as, roadside inspections) should be included in the traffic stop data.

Methodology

Racial profiling during traffic stops applies specifically to trooper-initiated (i.e., self-initiated or proactive) actions as reflected in the Texas state law definition of racial profiling. The traffic stop data assessed included all 2016 and 2017 traffic stops, separated by Highway Patrol and Commercial Vehicle Enforcement, that were trooper-initiated.

For Highway Patrol, the data excluded activities such as accident investigations, agency assists, and citations for failure to pay toll since these activities are not trooper-initiated. Instead, these activities are due to a call for service, request for assistance, or electronic identification by a license plate reader.

¹ Texas Code of Criminal Procedure 3.05.

For Commercial Vehicle Enforcement, the traffic stops assessed were limited to roadside inspections. Roadside inspections occur pursuant to a trooper-initiated traffic stop. Inspections which occur at commercial vehicle static inspection stations and scale houses were excluded from the data because the activity is not trooper-initiated. All ports of entry weigh stations are classified as scale houses. Further, inspections completed by non-commissioned inspectors were excluded from the data. Non-commissioned inspectors are not allowed to conduct roadside inspections which is the focus of the traffic stop analysis included in this report. Instead, non-commissioned inspectors are assigned to scale houses only.

Report Location

The traffic stop data, by race/ethnicity, for Highway Patrol and Commercial Vehicle Enforcement at the statewide level for 2016 and 2017 are included in the primary text. The traffic stop data, by race/ethnicity, for Highway Patrol² and Commercial Vehicle Enforcement for 2016 and 2017 at the region and district levels are included in Appendices A-L.

Research Task #2

Identify a representative population “base-rate” based on county-level demographic data from the U.S. Census Bureau for which demographic comparisons can be made to determine if racial/ethnic disparities exist.

Subtasks

- Demographic comparisons should consider geographical areas of traffic stops, and race/ethnicity groupings of traffic stop violators, compared to the race/ethnicity of troopers.

Why Data are not Presented in Report

TX DPS personnel provided the data on the location of each trooper-initiated traffic stop, race/ethnicity of traffic stop violators as well as the race/ethnicity of the trooper to the UNT research team. However, county-level demographic data from the U.S. Census Bureau is not a representative population base rate for comparison purposes and thus invalid. Therefore, the UNT research team decided to exclude the analysis from this report due to its invalidity.

The most common benchmark used in racial profiling research is the United States Census due to its easy availability at the city and county level. In other words, it is easy to know the percentage breakdown of Whites, Blacks, Asians and other races as well as Hispanics for any city or county

² There were 32 stops in 2016 and 2017 for Highway Patrol where the region and district were missing. In the region and district level tables in the appendices, these 32 stops are not included as they do not correspond to any region or district.

through the census.gov website (<https://www.census.gov>). With the two data points of 1) percentage of traffic stops by race/ethnicity of traffic stop violator and 2) percentage of residents by race/ethnicity in a city or county, an analysis can be completed to determine if there is a disparity between the two data points. It is important to note that all TX DPS regions and districts are comprised of entire counties which makes this type of analysis feasible at the statewide, region, and district levels. As an illustration, perhaps 40% of the traffic stops made by troopers in a particular district were of Hispanics and 10% of the district residents were Hispanic. Some then use this disparity as evidence of racial profiling against Hispanics. This conclusion is invalid. In other words, a pattern of disparities in traffic stops in comparison to U.S. Census data does not establish a pattern of racial profiling. Two justifications for this statement are presented below.

First, the U.S. Census is an invalid benchmark for comparison to traffic stops at the state, region, and district level. The U.S. Census is not an accurate measure of the driving population because it includes all ages, not just those who are old enough to drive and have a driver's license. In addition, since TX DPS troopers focus their enforcement efforts on interstates and state highways, traffic stop violators are not necessarily residents of the city or county in which the traffic stop occurred. When comparisons are made to the U.S. Census, the benchmark is commonly the city or county population demographic which only includes information on the racial/ethnic composition of the residents of the city or county and residents at the time of the census. Non-residents (i.e., individuals who did not reside in the city or county at the time of the census) are subject to traffic stops, but are not included in the comparison/base rate census data.

As mentioned, this is particularly true for TX DPS troopers since their enforcement efforts focus on interstates and state highways which are commonly traversed by drivers from throughout Texas and other states. For example, a resident of Dallas can receive a traffic citation on Interstate 37 outside San Antonio but will not be included in the U.S. Census data for that TX DPS region or district. Invalid conclusions are drawn if the racial/ethnic composition of individuals stopped by TX DPS troopers in a particular region or district are compared to the U.S. Census, because the U.S. Census is limited to the racial/ethnic composition of individuals who resided in the region or district when the census was collected.

Second, using the U.S. Census as a benchmark is based on the false assumption that drivers are at equal risk of being stopped for a traffic violation. Every driver does not have an equal chance of being stopped for a traffic violation. For example, if a person never commits a traffic violation, the person does not have a chance of being stopped. However, the individual is included in the U.S. Census data that is used as the benchmark as long as the individual was a resident of the region or district at the time of the census. Similarly, risk levels for traffic stops vary based on an individual's quality of driving, travel patterns (i.e., using interstates and state highways), frequency of driving, and driver exposure to TX DPS troopers. There are exposure and risk differentials across individuals for traffic stops which limits the use of the U.S. Census as a benchmark for disparity analysis.

Research Task #3

Examine the changes across time in the traffic stops at the statewide, regional, and district level

Methodology

Traffic stops at the statewide, region, and district levels are analyzed for 2016 and 2017.

Report Location

The traffic stop data, by race/ethnicity, for Highway Patrol and Commercial Vehicle Enforcement at the statewide level for 2016 and 2017 are included in the primary text. The traffic stop data, by race/ethnicity, for Highway Patrol and Commercial Vehicle Enforcement at the region and district levels for 2016 and 2017 are included in Appendices A-L.

Research Task #4

Examine DPS traffic stop findings by race/ethnicity against those of the largest city and county law enforcement agency at the statewide, regional, and district levels as available on the Texas Commission on Law Enforcement website.

Why Data are not Presented in Report

Law enforcement agencies are required to submit a racial profiling report annually to the Texas Commission on Law Enforcement (TCOLE). The standardized report is available on TCOLE's website. TX DPS personnel provided the UNT research team with the data on the location of each trooper-initiated traffic stop as well as the race/ethnicity of traffic stop violators. This same information is available for each law enforcement agency in Texas which makes traffic stops through the standardized reporting form on the TCOLE website. In order to complete the statewide comparison, the TX DPS data would have been compared to the TCOLE reporting form data from the Houston Police Department (i.e., largest city in Texas) and the Harris County Sheriff's Office (i.e., largest county in Texas). As an example at the region level, the analysis of the TX DPS Region 6 data would have been compared to the TCOLE reporting form data from the San Antonio Police Department (i.e., largest city in TX DPS Region 6) and the Bexar County Sheriff's Office (i.e., largest county in TX DPS Region 6). Furthermore, as an example at the district level, the analysis of the TX DPS District 1A data would have been compared to the TCOLE reporting form data from the Dallas Police Department (i.e., largest city in TX DPS District 1A) and the Dallas County Sheriff's Office (i.e., largest county in TX DPS District 1A).

The UNT research team determined that comparing the TX DPS data at the statewide, region, and district level with the largest city and county law enforcement agency in the state, region, or district, depending on the analysis performed, was invalid. TX DPS troopers focus their enforcement efforts on interstates and state highways while city and county law enforcement agencies commonly make traffic stops throughout their respective jurisdictions including arterial

roadways as well as collector and residential streets. In addition, the data from the largest city and county law enforcement agency in the state, region, and district are not representative of the traffic stop data throughout the state or the respective region or district. Therefore, the UNT research team decided to exclude the analysis from the report due to its invalidity.

Research Task #5

Determine if disparities exist in the likelihood of a citation versus a warning for all racial/ethnic groups, statewide, regionally, and at the district level.

Subtasks

- Examine the likelihood of a citation versus a warning for all racial/ethnic groups by service, HP and CVE separately at the statewide, regional, and district levels.

Methodology

Traffic stops at the statewide, region, and district levels are analyzed for 2016 and 2017. For each traffic stop, one of two enforcement actions occurs; citation or warning. In instances in which a citation and a warning was issued (e.g., citation for speeding and warning for equipment violation) during the same traffic stop, the enforcement action was analyzed as a citation since it is the more severe outcome. For analysis purposes, only one enforcement action was analyzed per traffic stop, either citation or warning, regardless of the number of citations or warnings issued during the stop.

Report Location

The traffic stop data, by race/ethnicity and enforcement action, for Highway Patrol and Commercial Vehicle Enforcement at the statewide level for 2016 and 2017 are included in the primary text. The traffic stop data, by race/ethnicity and enforcement action, for Highway Patrol and Commercial Vehicle Enforcement for 2016 and 2017, at the region and district levels are included in Appendices A-L. It is important to note that the Commercial Vehicle Enforcement analysis includes a third category of “clean” in addition to “citation” and “warning” since the outcome of a CVE stop can include no violations found.

Research Task #6

Determine if disparities exist in conditional search rates for the different types of searches for racial/ethnic groups.

Subtasks

- If practical, determine if disparities exist in the contraband found rates for the different types of searches for racial/ethnic groups.

Methodology

For each traffic stop, if a search occurred, the data were analyzed for research task #6. The data included the four types of searches collected by TX DPS; consent, incident to arrest, probable cause, and vehicle inventory. For each search completed, whether contraband was discovered during the search was analyzed. All data were disaggregated by race/ethnicity.

Report Location

The search data, by race/ethnicity and whether contraband was discovered, at the statewide level are included in the primary text. The search data, by race/ethnicity and whether contraband was discovered, at the region and district levels are included in Appendices A-L.

Research Task #7

Determine if conditional search rates display different patterns across the districts and regions compared to the statewide pattern.

Subtasks

- Examine the conditional search rates by service, HP and CVE separately at the statewide, regional, and district levels.
- If practical, determine if contraband found rates display different patterns across the districts and regions when compared to statewide.

Methodology

For each traffic stop, if a search occurred, the data were analyzed for research task #7. The data included four types of searches; consent, incident to arrest, probable cause, and vehicle inventory. For each search completed, whether contraband was discovered during the search was analyzed. All data were disaggregated by race/ethnicity and were analyzed at the statewide, region, and district levels for 2016 and 2017.

Report Location

The search data, by race/ethnicity and whether contraband was discovered, for Highway Patrol and Commercial Vehicle Enforcement at the statewide level for 2016 and 2017 are included in the primary text. The search data, by race/ethnicity and whether contraband was discovered, for Highway Patrol and Commercial Vehicle Enforcement for 2016 and 2017 at the region and district levels are included in Appendices A-L.

Research Task #8

Determine if racial/ethnic disparities exist in use of force incidents at a statewide level

Why Data are not Presented in Report

The UNT research team received a report from TX DPS personnel, dated April 11, 2017, on use of force from 2012-2016. The report documented: a) the number of use of force incidents by race/ethnicity from 2012-2016; b) number of use of force incidents excluding injury or death by a firearm by race/ethnicity from 2012-2016; c) number of deadly use of force incidents by firearm by race/ethnicity from 2012-2016; and, d) the number of suspect deaths by use of force by firearms by race/ethnicity from 2012-2016.

The data are not limited to use of force incidents pursuant to traffic stops. For example, a use of force incident during an agency assist would be included in the use of force report, but the agency assist is not included in the traffic stop data analyzed for this report. The UNT research team decided to exclude the analysis from this report due to its limited utility for the purposes of this report.

It is important to note that beginning January 1, 2018, law enforcement officers in Texas are required to collect “whether the officer used physical force that resulted in bodily injury, as that term is defined by Section 1.07, Penal Code,”³ for each traffic stop. Therefore, data on use of force, exclusive to trooper-initiated traffic stops, will be available at the end of calendar year 2018 and can be included in any future reports.

Research Task #9

If race/ethnic disparities are identified, provide best practice recommendations to correct existing disparities and prevent future disparities.

Methodology

The UNT research team identified and assessed the internal controls utilized within TX DPS to identify and mitigate racial profiling. In addition, the UNT research team completed a literature review of national law enforcement organizations, prominent law enforcement consulting firms, and government agencies to assess national best practices for the identification and mitigation of racial profiling. The best practices identified in the literature review were compared to TX DPS internal controls.

³ Texas Code of Criminal Procedure 2.133(b)(9).

Report Location

The internal control and best practice analysis is presented after the statewide level traffic stop and search data for Highway Patrol and Commercial Vehicle Enforcement for 2016 and 2017 are presented in the primary text.

Variables

The variables and measurement to complete the research tasks described in the previous section are discussed in this section of the report. The definitions and calculations for each variable are presented in Table 1. The variables in Table 1 are presented in the same order as in the tables throughout the report, but are presented in alphabetical order below.

- Area
- Contraband Hits
- Race/Ethnicity
- Race Known
- Searches – Includes the following types of searches and categorization
 - Consent (discretionary)
 - Incident to arrest (non-discretionary)
 - Probable cause (non-discretionary)
 - Vehicle inventory (non-discretionary)
- Stops – Each stop includes one of the following enforcement actions
 - Citation
 - Warning

Table 1: Variable Definitions and Calculations

Variable	Definition & Calculations
Area	Definition: Statewide, DPS Region, or DPS District
Race/Ethnicity	Definition: African American, Alaska Native or American Indian, Asian, Hispanic, Middle Eastern, Other, Unknown, White ⁴ Note: The trooper independently determines the race/ethnicity of the violator, presents the citation or warning to the violator, and asks the violator to verify all information on the citation or warning prior to signing.

⁴ Beginning on January 1, 2018, race or ethnicity includes the following categories: Alaska Native or American Indian; Asian or Pacific Islander; Black; White; and Hispanic or Latino according to the Texas Code of Criminal Procedure 2.132(a)(3).

Stops	<p>Definition: An occasion in which a peace officer stops a motor vehicle for an alleged violation of a law or ordinance⁵</p> <p>Calculations:</p> <ol style="list-style-type: none"> 1) <i>Frequency:</i> Number of stops, citations, or warnings by race/ethnicity 2) <i>Percent:</i> Number of stops, citations, or warnings by race/ethnicity divided by the number of stops, citations, or warnings for all racial/ethnic categories, times 100 3) <i>Rate per 100 stops:</i> Number of citations or warnings by race/ethnicity divided by number of stops by race/ethnicity, times 100 4) <i>Example rate calculation:</i> The rate of citations per 100 stops statewide for African-Americans in 2017 is calculated by taking the number of citations of African-Americans in 2017 by Highway Patrol troopers (96,804) divided by the total number of stops of African-Americans in 2017 (231,654) = 0.41788, times 100 = 41.79. <p>Note: The commercial vehicle enforcement (CVE) analysis includes a third category of “clean” in addition to “citation” and “warning” since the outcome of a CVE stop can include no violations found.</p>
Searches	<p>Definition: Searches based on consent, incident to arrest, probable cause, and vehicle inventory</p> <p>Calculations:</p> <ol style="list-style-type: none"> 1) <i>Frequency:</i> Number of all searches, discretionary searches, or non-discretionary searches by race/ethnicity 2) <i>Percent:</i> Number of all searches, discretionary searches, or non-discretionary searches by race/ethnicity divided by the number of all searches, discretionary searches, or non-discretionary searches for all racial/ethnic categories, times 100 3) <i>Rate per 100 stops:</i> Number of all searches, discretionary searches, or non-discretionary searches by race/ethnicity divided by number of stops by race/ethnicity, times 100 4) <i>Example rate calculation:</i> The rate of searches per 100 stops statewide for Whites in 2017 is calculated by taking the number of searches of Whites in 2017 by Highway Patrol troopers (33,453) divided by the total number of stops of Whites in 2017 (994,526) = 0.03363, times 100 = 3.36.
Contraband Hits	<p>Definition: Contraband was found during a search</p> <p>Calculations:</p> <ol style="list-style-type: none"> 1) <i>Frequency:</i> Number of contraband hits by race/ethnicity 2) <i>Percent:</i> Number of contraband hits by race/ethnicity divided by the number of contraband hits for all racial/ethnic categories, times 100

⁵ Texas Code of Criminal Procedure 2.132(a)(2).

	<p>3) <i>Rate per 100 searches:</i> Number of contraband hits by race/ethnicity divided by number of all searches by race/ethnicity, times 100</p> <p>4) <i>Example rate calculation:</i> The rate of contraband hits per 100 stops statewide for Hispanics in 2017 is calculated by taking the number of contraband hits of Hispanics in 2017 by Highway Patrol troopers (11,745) divided by the total number of searches of Hispanics in 2017 (45,812) = 0.25639, times 100 = 25.64.</p>
Race Known	<p>Definition: Whether the peace officer knew the race or ethnicity of the driver before the motor vehicle stop⁶</p> <p>Calculations:</p> <ol style="list-style-type: none"> 1) <i>Frequency:</i> Number of times trooper knew the race or ethnicity of the driver before the stop by race/ethnicity⁷ 2) <i>Percent:</i> Number of times trooper knew the race or ethnicity of the driver before the stop by race/ethnicity divided by number of times trooper knew the race or ethnicity of the driver before the stop for all racial/ethnic categories, times 100 3) <i>Rate per 100 stops:</i> Number of times trooper knew the race or ethnicity of the driver before the stop by race/ethnicity divided by number of stops by race/ethnicity, times 100 4) <i>Example rate calculation:</i> The rate of “race known” per 100 stops statewide for Asians in 2017 is calculated by taking the number of stops of Asians in 2017 by Highway Patrol troopers where race was indicated as known (103) divided by the total number of stops of Asians in 2017 (35,131) = 0.00293, times 100 = 0.29.

Data Analysis Process

This section of the report reviews the analysis conducted by the UNT research team on the traffic stop and search data provided by TX DPS personnel. The data are analyzed within four chronological stages for each traffic stop and presented in over 200 tables throughout the report. Each table presented throughout the report has the same format to accommodate the readability of the tables.

⁶ Texas Code of Criminal Procedure 2.132(b)(6)(c).

⁷ From the original Commercial Vehicle Enforcement data, the variable indicating whether the trooper knew the race/ethnicity of the motorist prior to the stop had 290,760 blank entries, 3,096 entries indicating race was known prior to the stop, and 40,028 stops where race was not known prior to the stop. After consulting with TX DPS personnel, these 290,760 blank entries were considered “missing” versus “race not known prior to the stop”.

Stage 1: Traffic Stop Data Analysis

In stage 1, a trooper conducts a traffic stop under a circumstance authorized by TX DPS policy. According to Texas DPS 04.02.02 Traffic Stop policy, a DPS officer:

may stop and detain a motor vehicle or an occupant for a valid law enforcement purpose, but only under the following justifiable circumstances:

- a. When probable cause exists to arrest or search for any violation of law, including traffic offenses;
- b. When reasonable suspicion exists to detain for any violation of law, including traffic offenses;
- c. When conducting a suspicionless stop, including a traffic regulatory checkpoint, a Commercial Motor Vehicle Enforcement checkpoint, a DWI checkpoint, or a roadblock under the provisions of this policy; or
- d. When an emergency situation arises, such as delivering an emergency message or rendering some other public service. An officer may exercise reasonable discretion when determining the existence of an emergency or public service situation.
- e. Community Caretaking Exception: Officers can make a stop based solely upon the belief that a subject is in need of help. This belief must be REASONABLE based upon all of the following circumstances. Officers need to be able to ARTICULATE the reasons for our belief that the subject was in need of immediate assistance and that we were the only assistance available. The Court gives us five (5) factors to consider. They are:
 - 1) the nature and level of the distress exhibited by the individual;
 - 2) the location of the individual;
 - 3) whether or not the individual was alone and/or
 - 4) had access to assistance independent of that offered by the officer and to
 - 5) what extent the individual-if not assisted-presented a danger to himself or others.

The data analyzed in this report include traffic stops under subsection (a) and (b) of the TX DPS traffic stop policy. The traffic stop data are presented in each table, by race/ethnicity. For example, Highway Patrol troopers conducted 2,171,021 traffic stops throughout the state in 2017. Of these stops, 45.81% of the violators stopped were White, 41.15% were Hispanic, 10.67% were African American, and 1.62% were Asian.

Using Traffic Stop Data to Assess Racial Disparities

Law enforcement officers are required under the Texas racial profiling law to document whether they knew the race or ethnicity of the violator prior to the traffic stop. The data on whether the trooper knew the race or ethnicity of the violator before the motor vehicle stop is presented under the “Race Known” row in each table throughout this report. For example, of the 2,171,021 traffic stops conducted by Highway Patrol troopers throughout the state in 2017, the trooper knew the race/ethnicity of the violator prior to the stop only 11,209 times (0.52% of all traffic stops).

The traffic stop data analysis cannot be used to identify racial profiling because the trooper rarely knows the race/ethnicity of the violator prior to the traffic stop. When deciding to stop someone for a traffic violation, a prerequisite to racially profiling the violator is the trooper must know the race/ethnicity of the violator prior to the stop. A trooper cannot racially profile a violator when making a traffic stop unless the trooper knows the race/ethnicity of the violator prior to the stop. As mentioned above, troopers rarely know the race/ethnicity of violators prior to traffic stops. In 2017, Highway Patrol troopers did not know the race/ethnicity of the violator prior to stop in 99.48% of all traffic stops.

This percentage is consistent across law enforcement agencies throughout Texas. An analysis of all annual racial profiling reports in 2014 submitted to the Texas Commission on Law Enforcement, as required by the Texas racial profiling law, found that in 97.1% of the traffic stops in Texas the officer did not know the race or ethnicity of the violator prior to the stop.⁸ The analysis included 1,186 Texas law enforcement agencies and more than 3.25 million traffic stops. Based on the analysis, it is highly unlikely for an officer to know the race or ethnicity of a violator prior to a traffic stop. An officer cannot stop violators based on their race if they do not know the race of the violator prior to the stop. Similarly, an officer cannot racially profile a violator when they do not know the violator’s race or ethnicity prior to the stop.

Additional factors impact the analysis of traffic stop data as well. Variations in the number of traffic stops across TX DPS regions and districts can be due to deployment practices and department initiatives. For example, in 2015, the Texas Legislature approved 250 new troopers specifically for border security in TX DPS Region 3. Previously, region deployment decisions were based on the number of accidents within the region. Therefore, although the state is divided into six regions, an equal number of troopers is not assigned to each region.

In order to assess the deployment of troopers during 2016 and 2017, the UNT research team received the quarterly measures of the average number of troopers assigned within each region. The quarterly measures were then averaged to obtain an annual average (see Table 2). The numbers illustrated in Table 2 excludes vacant positions. The influx of troopers into Region 3 for border security purposes is evident in the growth from 2016-2017. In 2016, there was an average of 441 troopers assigned to Region 3, but the average increased to 549 troopers in 2017; a 24.5% increase.

⁸ Winkler, Jordan M. (2016). *Racial Disparity in Traffic Stops: An Analysis of Racial Profiling Data in Texas*. Master's Thesis. University of North Texas.

As illustrated in Table 2, there are significantly more troopers assigned in Region 3: McAllen and Region 1: Dallas in comparison to Region 5: Lubbock and Region 4: El Paso. Deployment practices are important to consider as comparisons are made across TX DPS regions and districts. A higher number of traffic stops and searches are expected in regions with more assigned troopers. The variation in the number of troopers deployed in each region can impact any disparity analysis completed across regions and districts.

Table 2: Number of Troopers Assigned by Region

Region	2016	2017
1:Dallas	496	540
2:Houston	442	471
3:McAllen	441	549
4:El Paso	219	242
5:Lubbock	274	288
6:San Antonio	364	396

Disparity analysis across TX DPS regions and districts is also impacted by strategic initiatives completed by TX DPS during the data analysis period of 2016 and 2017. As an example, during the data analysis period, TX DPS participated in several concentrated initiatives including a Violent Crime Task Force initiative in San Antonio, Operation North Star in Houston, and Operation Secure Texas which ended in September 2017. The deployment of troopers to strategic initiatives impacts the activity levels within the regions and districts affected and leads to a higher number of traffic stops and searches than otherwise expected.

The current state of the racial profiling literature recognizes the issues discussed above and now focuses more on post stop actions which occur after the officer has made initial contact with the violator after the traffic stop. After the initial contact, the officer knows the race/ethnicity of the violator. Post stop actions include the enforcement action of the stop (i.e., citation vs. warning) and searches. These post stop actions are assessed in each table in this report.

Stage 2: Traffic Stop Enforcement Action Analysis

In stage 2, after a trooper initiates a traffic stop, the trooper decides on one of two enforcement actions; issue a warning or issue a citation. In instances in which a citation and a warning was issued (e.g., citation for speeding and warning for equipment violation) during the same traffic stop, the enforcement action was analyzed as a citation since it is the more severe outcome. For analysis purposes, only one enforcement action was analyzed per traffic stop, either citation or warning, regardless of the number of citations or warnings issued during the stop.

It is important to note that in each commercial vehicle enforcement (CVE) table throughout this report, a third category of “clean” in addition to “citation” and “warning” is included. An enforcement action of citation or warning is not required for CVE stops since the outcome of a

CVE stop can include no violations found. When no violations are found, the outcome of the stop is classified as “clean.”

How do troopers decide whether to issue a warning or a citation after a traffic stop? Texas DPS 05.01.05 Enforcement Policies policy, provides troopers direction on the factors to consider when making an enforcement action decision. According to the policy:

officers in deciding on enforcement action to be taken shall be guided by the policies enunciated in this Manual and shall disregard irrelevant factors such as (1) intention to violate the law, (2) attitude exhibited by the violator, (3) lack of actual hazard, and (4) frivolous excuses. The type of enforcement action taken shall be based only on (1) the seriousness of the offense, (2) the degree of the violation, or (3) the conditions and circumstances surrounding the offenses that might aggravate its potential effect.

- A. Seriousness of the offense, e.g., muffler vs. DWI
- B. The degree of the violation, e.g., speeding 33 MPH in a 30 MPH zone vs. speeding 55 MPH in a 30 MPH zone
- C. The conditions and circumstances surrounding the offense
 - 1) A violation may be committed to a minor degree but under conditions that aggravate its potential effect. These conditions may warrant an arrest where a warning would otherwise suffice. Some of the aggravated conditions are:
 - a. Adverse weather
 - b. Heavy traffic volume
 - c. Bad road condition
 - d. Bad vehicle condition (size, load, age, maintenance, etc.)
 - e. Bad driver condition (physical and mental infirmities, drinking, fatigue, etc.)
 - f. Multiple violations – two or more to a minor degree
 - g. Restricted visibility

The traffic stop enforcement action data are presented in each table, by race/ethnicity, throughout this report. For example, of the 770,936 citations issued by Highway Patrol troopers in 2017 throughout the state, 46.90% of the citations were issued to Hispanic violators, 38.08% of the citations were issued to White violators, 12.56% of the citations were issued to African American violators, and 1.63% of all citations were issued to Asian violators. In addition, of the 1,400,085 warnings issued by Highway Patrol troopers in 2017 throughout the state, 50.06% of the warnings were issued to White violators, 37.99% of the warnings were issued to Hispanic violators, 9.63% of the warnings were issued to African American violators, and 1.61% of all warnings were issued to Asian violators. Overall, of the 2,171,021 traffic stops conducted by Highway Patrol troopers

throughout the state in 2017, the enforcement action was a warning in 64.5% of the traffic stops while the enforcement action was a citation in 35.5% of the traffic stops.

The rate per 100 stops for both citations and warnings, by race/ethnicity, is also presented in each table throughout the report. For the 2017 Highway Patrol data for the entire state, African American violators received a citation in 41.79 of every 100 stops of African American violators. On the other hand, African American violators received a warning in 58.21 of every 100 stops of African American violators. Similarly, Hispanic violators received a citation in 40.47 of every 100 stops of Hispanic violators. On the other hand, Hispanic violators received a warning in 59.53 of every 100 stops of Hispanic violators.

Middle Eastern violators received a citation in 39.28 of every 100 stops of Middle Eastern violators. On the other hand, Middle Eastern violators received a warning in 60.72 of every 100 stops of Middle Eastern violators. Alaska Native/American Indian violators received a citation in 38.21 of every 100 stops of Alaska Native/American Indian violators. On the other hand, Alaska Native/American Indian violators received a warning in 61.79 of every 100 stops of Alaska Native/American Indian violators. Asian violators received a citation in 35.78 of every 100 stops of Asian violators. On the other hand, Asian violators received a warning in 64.22 of every 100 stops of Asian violators. Finally, White violators received a citation in 29.52 of every 100 stops of White violators. On the other hand, White violators received a warning in 70.48 of every 100 stops of White violators. For each race/ethnicity, the most likely enforcement action taken by Highway Patrol troopers throughout the state in 2017 was the issuance of a warning.

However, under certain circumstances, written warnings cannot be issued which leaves the trooper with the options of arrest or citation. According to Texas DPS 05.01.02 Types of Enforcement Action policy:

Written warnings will not be issued under any circumstances for:

- a) Driving while intoxicated
- b) Public intoxication
- c) No drivers license when not licensed
- d) Any nontraffic offense
- e) Violations which contribute to a traffic crash

Using Traffic Stop Enforcement Action Data to Assess Racial Disparities

For a disparity analysis of enforcement actions in the tables throughout this report, the enforcement actions provided as the rate per 100 traffic stops are the most informative of differences by race/ethnicity. As demonstrated in the above paragraphs, there are disparities across race/ethnicity in the likelihood of receiving a citation. Per 100 stops made by Highway Patrol troopers throughout the state in 2017, African American violators received a citation in 41.79 of the stops, Hispanic violators received a citation in 40.47 of the stops, Middle Eastern violators received a citation in 39.28 of the stops, Alaska Native/American Indian violators received a citation in 38.21

of the stops, Asian violators received a citation in 35.78 of the stops, and White violators received a citation in 29.52 of the stops.

How does the UNT research team interpret the disparity in citation rate by race/ethnicity for Highway Patrol troopers throughout the state in 2017? To state the reason for the disparity in citation rate across race/ethnicity is due to race only and thus demonstrates racial profiling on the part of Highway Patrol troopers is conjecture. As illustrated in the Texas DPS 05.01.05 Enforcement Policies policy, the enforcement action decision is both complex and nuanced. The enforcement action (i.e., citation or warning) taken by a trooper is based on several factors.

As an illustration, deciding whether to issue a citation to a violator can be based on the seriousness of the offense, the degree of the violation, and the conditions and circumstances surrounding the traffic offense that may aggravate its potential effect. For example, regarding the seriousness of the offense, speeding is probably more likely to result in a citation than a defective tail light. Similarly, regarding the degree of the violation, a citation is probably more likely for driving 75 miles per hour in a 45 miles per hour zone than driving 55 miles per hour in the same 45 miles per hour zone. Finally, regarding the conditions and circumstances surrounding the traffic offense that may aggravate its potential effect, a traffic offense that may otherwise lead to a warning may lead to a citation due to adverse weather conditions, heavy traffic volume, or poor road conditions.

The enforcement decisions troopers make are based on several factors and not all the factors are indicated on the citation or warning and thus included in the TX DPS database, especially the conditions and circumstances surrounding the traffic offense. Therefore, since most of the factors considered by the officer before taking the enforcement action are unknown (i.e., not in the TX DPS database), it is invalid to state the factor that explains the disparity in enforcement actions is race/ethnicity. A pattern of disparities in traffic stop enforcement actions does not establish a pattern of racial profiling.

A disparity just shows a difference, but it does not provide an explanation for the difference. Concluding that a disparity in enforcement actions by race/ethnicity is evidence of racial profiling is an invalid conclusion. If a disparity alone is an indication of discrimination, then the police in the United States discriminate based on gender when making arrest decisions. According to the 2015 Uniform Crime Reports, of the over 8.3 million arrests in the United States, 73.1% of the arrestees were male while 26.9% were female. However, the 2010 U.S. Census illustrates that 49.2% of U.S. population is male. This disparity is clearly not evidence of gender discrimination by the police, but it is the same analysis done by some to claim racial profiling. As another example, according to the 2016 Uniform Crime Reports, 30.4% of the arrests in the United States were of 15-24 years old. However, the 2010 U.S. Census shows that only 14.1% of the U.S. population is 15-24 years old. Once again, this disparity is clearly not evidence of age discrimination by the police, but it is the same analysis done by some to claim racial profiling. A disparity in enforcement actions (i.e., citation vs. warning) can be due to numerous factors. It is invalid to conclude that any racial disparity in enforcement action is due to racial profiling.

Stage 3: Search Analysis

In stage 3, a trooper may conduct a search during the traffic stop. If a search is conducted, the trooper documents the justification for the search which includes consent, incident to arrest, probable cause, and vehicle inventory. Most traffic stops do not include a search. In 2017, Highway Patrol troopers conducted 2,171,021 traffic stops throughout the state, but only 99,322 of the stops included a search. Overall, 4.57% of the traffic stops included a search.

Although not required by Texas law, TX DPS requires reasonable suspicion for consent searches. This policy requirement provides additional protection to Texas motorists. Typically, a law enforcement officer, without any level of proof, can request consent to search. According to Texas DPS 05.74.00 Request for Consent to Search policy:

absent probable cause to search a vehicle, troopers must assess the circumstances present on every traffic contact made and decide, based on training and experience, whether any activity outside of a traffic violation exists. Consistent with the expectations set by the Texas Appeals Courts, it is the policy of the Texas Department of Public Safety that a decision to request consent to search a person's vehicle shall be based only on articulable, reasonable suspicion that the occupant(s) may be engaged in criminal conduct.

For the search analysis which is presented in each table throughout this report, the UNT research team separated the justifications for the searches into two categories: discretionary and non-discretionary. Searches conducted incident to arrest, based on probable cause, and pursuant to a vehicle inventory are classified as non-discretionary since troopers are required by state law or department policy to conduct the search. In other words, the troopers are not making an independent decision to conduct the search, but instead are following law and policy in conducting searches based on probable cause, vehicle inventory, or incident to arrest. The classification of these searches as non-discretionary is analogous to limiting the traffic stop analysis to trooper-initiated stops only, as previously discussed.

These searches should not be analyzed in terms of whether or not racial profiling has occurred because the officer who has searched a violator as a result of the three above factors does not independently make the decision to search, but rather, is required to search that individual regardless of any determination of race. For example, if a trooper arrests a violator for an outstanding arrest warrant, the trooper is required to complete a vehicle inventory if the vehicle is impounded. A trooper cannot be determined to be racially profiling when departmental procedures or state law compels the trooper to conduct a search. The individual's race or ethnicity is irrelevant to the search under these non-discretionary search circumstances. Data on non-discretionary and discretionary searches are separated in each table throughout this report.

Despite the enhanced requirement of TX DPS which mandates reasonable suspicion for a trooper to request consent to search, consent searches are classified as discretionary searches because the trooper makes an independent decision to request permission to search. In 2017, Highway Patrol troopers conducted 2,171,021 traffic stops throughout the state, but only 33,391 of the stops included a consent search. Overall, 1.54% of the traffic stops conducted by Highway Patrol troopers in 2017 throughout the state included a consent search.

As previously mentioned, the current state of the racial profiling literature focuses on post stop actions which occur after the law enforcement officer has made initial contact with the violator. After the initial contact, the officer knows the race/ethnicity of the violator. Consent searches, since they are discretionary actions, are particularly scrutinized in racial profiling analyses. It is expected that consent searches will rarely occur, but a minimum threshold has not been established in the racial profiling literature. In other words, there is no standard set that states “racial profiling should be considered as a factor when XX percent of traffic stops result in a consent search.”

Using Search Analysis Data to Assess Racial Disparities

Of the 33,391 traffic stops by Highway Patrol troopers in 2017 throughout the state that resulted in a consent search, 57.46% were Hispanic violators, 30.05% were White violators, 11.00% were African American violators, and 0.82% were Asian violators.

For a disparity analysis of consent searches in the tables throughout this report, the rate of consent searches per 100 traffic stops is the most informative of differences by race/ethnicity. Per 100 traffic stops made by Highway Patrol troopers throughout the state in 2017, there was a consent search in 2.15 of the stops of Hispanic violators, 2.07 of the stops of Alaska Native/American Indian violators, 1.59 of the stops of African American violators, 1.01 of the stops of White violators, 0.99 of the stops of Middle Eastern violators, and 0.88 of the stops of Asian violators. As indicated in the consent search rate in the 2017 Highway Patrol statewide data, consent searches occur in approximately two or fewer stops for every 100 stops regardless of race/ethnicity.

As demonstrated in the above paragraph, there are disparities across race/ethnicity in the likelihood of being subjected to a consent search. How does the UNT research team interpret the disparity in consent search rate by race/ethnicity for Highway Patrol troopers throughout the state in 2017? In assessing the disparity in consent search rate by race/ethnicity, the research team considers four factors.

First, the UNT research team assesses how often consent searches occur and expects them to be few in number which then results in a small percentage of all traffic stops resulting in a consent search. As previously mentioned, there is no standard set that states “racial profiling should be considered as a factor when XX percent of traffic stops result in a consent search.” However, only 1.54% of the traffic stops conducted by Highway Patrol troopers in 2017 throughout the state resulted in a consent search. With over 2 million traffic stops in 2017 by Highway Patrol troopers throughout the state and less than 35,000 consent searches, this is an indication to the UNT research team of the judicious use of consent searches by TX DPS troopers.

Second, the UNT research team assesses how often consent searches occur by race/ethnicity. Of the 33,391 consent searches in 2017 by Highway Patrol troopers throughout the state, 19,188 were of Hispanic violators, 10,035 were of White violators, 3,673 were of African American violators, 310 were of Asian violators, 139 were of Middle Eastern violators, and 46 were of Alaska Native/American Indian violators. Since some of the totals by race/ethnicity are particularly small in number (e.g., only 310 consent searches of Asian violators), any statistics can be dramatically impacted by even slight changes in the total number of consent searches for a particular racial/ethnic group.

As an illustration, there were 139 consent searches out of the 14,108 traffic stops of Middle Eastern violators by Highway Patrol troopers throughout the state in 2017. The consent search rate per 100 stops of Middle Eastern violators is 0.99. If the number of consent searches is increased from 139 (actual number) to 200 (example number), the consent search rate per 100 stops of Middle Eastern violators is then 1.43. This is a 44% increase in the consent search rate with the addition of only 61 more consent searches. However, adding 61 consent searches to the 10,035 total consent searches of White violators by Highway Patrol troopers throughout the state in 2017 only increases the consent search rate per 100 stops of White violators from 1.01 (actual rate) to 1.02 (example rate). Therefore, it is important to consider the total number of consent searches for each racial/ethnic group when assessing consent search rate disparities. This issue amplifies as the data are divided by district and region level disparity analyses of consent searches in the appendices of this report.

Third, the interpretation of any disparity in consent search rate by race/ethnicity is impacted by the TX DPS policy which requires troopers have reasonable suspicion before requesting permission/consent to search. Although not required by Texas law, TX DPS requires reasonable suspicion for consent searches that provides additional protection to Texas motorists. Typically, a law enforcement officer, without any level of proof, can request consent to search. However, TX DPS policy requires “articulable, reasonable suspicion that the occupant(s) may be engaged in criminal conduct” before troopers can ask for consent to search. This requirement is important in the disparity analysis of consent search rate since the troopers had a reasonable justification for requesting permission to search regardless of the race/ethnicity of the violator. For each consent search, troopers have identified legal, articulable factors to believe the violator may be engaged in criminal activity. To state the reason for the disparity in consent search rate across race/ethnicity is due to race and thus demonstrates racial profiling on the part of troopers is conjecture.

Fourth, of the four types of searches in the analysis (i.e., consent, incident to arrest, probable cause, and vehicle inventory), consent searches are the only optional searches since violators can deny troopers permission/consent to search. The consent search denial cannot then be used by troopers to justify probable cause to search. It is the right of the violator to grant or deny the requests of troopers to conduct a consent search. However, troopers will conduct searches incident to arrest, searches based on probable cause, and vehicle inventories regardless of the wishes of the violator.

Since violators can deny consent to search, there are two subpopulations within the larger consent search category; 1) those who granted consent to search, and 2) those who denied consent to search. The data collection requirements under the Texas racial profiling law only require the documentation of race/ethnicity of the former, but requires no data collection on the latter. Therefore, the UNT research team does not know if there are any disparities by race/ethnicity in consent search denials. If there are disparities, and certain racial/ethnic groups are more or less likely to grant permission/consent to search upon request by troopers, then the interpretation of any disparities in consent search rate by race/ethnicity is further complicated. For example, if White violators are less likely to grant consent to search in comparison to African American violators, the consent search rate per 100 stops will be higher for African American violators even if the same number of White and African American violators were asked for consent to search. The lack of available data on violators who deny consent to search leaves an incomplete picture of what explains disparities, by race/ethnicity, in the consent search rate.

Stage 4: Contraband Hit Analysis

In stage 4, a trooper who conducts a search may seize contraband during the search. If contraband is seized during the search, the seizure is documented as a contraband hit in the TX DPS data provided to the UNT research team. The contraband hits included seizures pursuant to all types of searches in the TX DPS database; consent, incident to arrest, probable cause, and vehicle inventory. In 2017, Highway Patrol troopers conducted 99,322 searches throughout the state and 32,962 of the searches resulted in the seizure of contraband. Overall, 33.19% of the searches conducted by Highway Patrol troopers in 2017 throughout the state resulted in a contraband hit.

As previously mentioned, the current state of the racial profiling literature focuses on post stop actions which occur after the law enforcement officer has made initial contact with the violator. After the initial contact, the officer knows the race/ethnicity of the violator. Some research has assessed the success rate or contraband hit rate of searches pursuant to traffic stops to determine if there are differences across racial/ethnic groups. There is an expectation that a certain percentage of searches will result in the discovery of contraband, but a minimum threshold has not been established in the racial profiling literature. In other words, there is no standard set that states “racial profiling should be considered when fewer than XX percent of searches result in the discovery of contraband.”

Using Contraband Hit Analysis Data to Assess Racial Disparities

Of the 32,962 searches that resulted in the seizure of contraband (i.e., contraband hits) by Highway Patrol troopers in 2017 throughout the state, 40.35% were White violators, 35.63% were Hispanic violators, 22.63% were African American violators, and 0.85% were Asian violators.

For a disparity analysis of contraband hits in the tables throughout this report, the rate of contraband hits per 100 searches is the most informative of differences by race/ethnicity. Per 100 searches made by Highway Patrol troopers throughout the state in 2017, there was a contraband

hit in 39.76 of the searches of White violators, 39.73 of the searches of African American violators, 37.77 of the searches of Middle Eastern violators, 36.73 of the searches of Alaska Native/American Indian violators, 34.61 of the searches of Asian violators, and 25.64 of the searches of Hispanic violators.

As demonstrated in the above paragraph, there are disparities across race/ethnicity in the likelihood of a contraband hit pursuant to a search. How does the UNT research team interpret the disparity in contraband hit rate by race/ethnicity for Highway Patrol troopers throughout the state in 2017? In assessing the disparity in contraband hit rate by race/ethnicity, the research team considers two factors.

First, the largest number of searches, non-discretionary searches (i.e., incident to arrest, probable cause, and vehicle inventory) and discretionary searches (i.e., consent), are of Hispanic violators, but the contraband hit rate per 100 searches is lowest for Hispanic violators. This means that Hispanic violators are most likely to be searched but least likely to have contraband discovered pursuant to the search. The contraband hit rate per 100 searches ranges from 39.76 of the searches of White violators to 34.61 of the searches of Asian violators for all the racial categories except Hispanic violators who have a contraband hit rate per 100 searches of 25.64.

After assessing traffic stops, searches, and contraband hits across the TX DPS regions (tables available in the appendices), the most tenable explanation for the lower contraband hit rate per 100 searches of Hispanic violators is due to strategic border security initiatives and trooper deployment strategies. Of the 893,444 traffic stops made by Highway Patrol troopers throughout the state in 2017 of Hispanic violators, 429,427 occurred in Region 3 (48.06%). Similarly, of the 45,812 searches (i.e., consent, incident to arrest, probable cause, and vehicle inventory) made by Highway Patrol troopers throughout the state in 2017 of Hispanic violators, 18,756 occurred in Region 3 (40.94%). Furthermore, the contraband hit rate of 14.44 per 100 searches for Hispanic violators in Region 3 by Highway Patrol troopers in 2017 is the lowest rate for Hispanic violators in all TX DPS regions. Eight of the 14 counties in Texas which are adjacent to the United States border with Mexico are in TX DPS Region 3: McAllen as illustrated on the map on page 26.

Second, a low contraband hit rate is expected in some circumstances since the main purpose of some of the searches is not the discovery of contraband or other evidence. For example, the main purpose of searches incident to arrest and vehicle inventories is not the discovery of contraband. Instead, the main purpose of a search incident to arrest is trooper safety; ensuring the violator does not have any items that can harm the trooper. Also, the main purpose of a vehicle inventory is the documentation and protection of the items inside the violator's vehicle prior to impoundment, not the discovery of contraband. In these circumstances, it is expected the contraband hit rate should be low. On the other hand, the primary purpose of searches based upon probable cause and consent searches based on reasonable suspicion is the discovery of contraband or other evidence. In these instances, a higher contraband hit rate is expected.

As the tables are reviewed, the reader will see some of the cells within the table have --- instead of a number. These are not calculation errors. Instead, --- is put in the cell of a table when the denominator in the calculation is 0; thus making the value incalculable. For example, on the Statewide 2017 Highway Patrol table, the rate of discretionary searches per 100 stops for “other” races does not include a calculation because the calculation of the rate entails dividing the number of discretionary searches of “other” race individuals (0) by the number of stops of “other” race individuals (0), multiplied by 100 which equals not calculable.

Internal Controls

The TX DPS has implemented proactive, internal controls in support of its zero-tolerance regarding racial profiling. The primary internal controls are discussed below.

- 1) Troopers are required to record audio and video of each traffic stop. The TX DPS preserves each recording for 90 days and preserves recordings of stops involving allegations of racial profiling indefinitely.
- 2) Troopers must set the audio/video recording unit's operator selector switch to "automatic mode" so that as the patrol vehicle's emergency lighting equipment is activated, the audio/video recording unit will automatically activate to begin recording the entire contact or event.
- 3) Patrol vehicle recording units are set to capture at least two minutes prior to the activation of the video unit so that events occurring immediately prior to a public contact are recorded.
- 4) TX DPS sergeants are required to conduct 20 hours of video observation review every six months for each trooper the sergeant supervises.
- 5) TX DPS citations and warnings are printed with a toll free phone number to the TX DPS Office of Inspector General. The Inspector General is appointed by and reports directly to the Public Safety Commission and independently receives and investigates complaints, including complaints of racial profiling, brought against TX DPS commissioned officers.
- 6) As previously mentioned, although not required by Texas law, TX DPS requires reasonable suspicion for consent searches that provides additional protection to Texas motorists. Typically, a law enforcement officer, without any level of proof, can request consent to search. However, TX DPS policy requires "articulable, reasonable suspicion that the occupant(s) may be engaged in criminal conduct" before troopers can ask for consent to search. For each consent search, troopers identify legal, articulable factors to believe the violator may be engaged in criminal activity before asking for permission/consent to search.
- 7) TX DPS has an Early Intervention System (EIS), which is designed to assist supervisors with timely identification of employees whose performance warrants review and, where appropriate, intervention. The EIS goal is to avoid or mitigate circumstances that cause negative consequences for employees, co-workers, the TX DPS, or the general public. Using a web-based software application, the EIS provides a systematic review of select activities or incidents received or generated by an employee or TX DPS. The EIS is administered by The Office of Inspector General and is designed to highlight tendencies in performance, complaints and other activities. An alert for supervisory review is generated by the EIS when an employee meets, or exceeds, an established threshold in the following areas: informal citizen concerns, counseling/coaching record, use of force incident, vehicle crashes, vehicle pursuits, and Equal Employment Opportunity complaints.
- 8) TX DPS 05.01.02 Types of Enforcement Action policy requires troopers write a written warning if the violator is not arrested or issued a citation. According to the policy:

Persons stopped by officers for traffic law violations of a relatively minor degree and who are not arrested or issued a citation will be issued a written notice of warning.

This policy is important as an internal control regarding racial profiling. If TX DPS policy allowed verbal warnings, no data on the race/ethnicity of the violator would be collected since there is not any written documentation of the violation. By requiring a written warning, TX DPS collects the race/ethnicity of the violator on all traffic stops which provides the most comprehensive data available for racial profiling analysis.

The UNT research team compared the TX DPS internal controls with best practices recommended by the International Association of Chiefs of Police⁹ and the U.S. Department of Justice¹⁰ along with additional literature from national law enforcement organizations, prominent law enforcement consulting firms, and government agencies, and Texas law enforcement agencies in which the UNT research team completes annual racial profiling reports. After the review and comparison, the UNT research team concludes that the TX DPS internal controls align with documented best practices. For example, the U.S. Department of Justice states, “data collection sends a clear message that racial profiling is inconsistent with effective policing.” Not only does TX DPS collect racial profiling data, it releases the raw traffic stop data at the below publicly available website for analysis by any individual. This is an uncommon practice for law enforcement agencies and TX DPS should be lauded for its transparency in this area.

https://www.dps.texas.gov/director_staff/highValueDataSets.htm

As another example, the International Association of Chiefs of Police states department policies “should clearly convey that behavior and evidentiary standards should guide stop and search decisions, not race or ethnicity.” The TX DPS policies discussed throughout this report demonstrate that TX DPS meets this standard. As previously stated, the UNT research team concludes that the TX DPS internal controls align with documented best practices and do not offer any recommended changes to its current practices, policies, and protocols.

The UNT research team also concludes that some of the TX DPS internal controls exceed documented best practices. For example, requiring reasonable suspicion for consent searches is uncommon among law enforcement agencies and provides additional protection to Texas motorists. Due to this requirement, troopers must identify legal, articulable factors to believe the violator may be engaged in criminal activity before asking for permission/consent to search. In addition, by requiring a written warning, TX DPS collects the race/ethnicity of the violator on all traffic stops which provides the most comprehensive data available for racial profiling analysis. TX DPS should be lauded for its internal control mechanisms to inhibit racial profiling.

Research Team

Eric J. Fritsch is Professor and Chair of the Department of Criminal Justice at the University of North Texas (UNT). He received his Ph.D. in Criminal Justice from Sam Houston State University in 1995 and has been a faculty member at UNT since August 1996. While at UNT, he has taught the department's graduate level research methods course 19 times.

Chad R. Trulson is Professor and Associate Chair of the Department of Criminal Justice at the University of North Texas (UNT). He received his Ph.D. in 2002 from Sam Houston State University, George J. Beto College of Criminal Justice.

Dr. Trulson has published numerous articles in leading criminal justice journals in addition to four co-authored books: *Juvenile Justice: System, Process, and Law* (Cengage, 2006), *First Available Cell: Desegregation of the Texas Prison System* (University of Texas Press, 2009) *Applied Research Methods in Criminal Justice and Criminology* (McGraw-Hill, 2014) and *Lost Causes: Blended Sentencing, Second Chances, and the Texas Youth Commission* (University of Texas Press, 2016). Dr. Trulson also serves as Editor-in-Chief of the highly ranked journal, *Youth Violence and Juvenile Justice* (SAGE).

Dr. Fritsch and Dr. Trulson are co-authors on a research methods textbook entitled *Applied Research Methods in Criminal Justice and Criminology*; published by McGraw-Hill in 2014. Specifically regarding racial profiling, they complete the annual racial profiling reports for 15-20 Texas law enforcement agencies each year. The annual racial profiling reports are required under the Texas Racial Profiling Law. They began completing these reports in 2005. In addition to the annual racial profiling reports, they published a peer-reviewed article entitled *Racial Profiling and the Political Demand for Data: A Pilot Study Designed to Improve Methodologies in Texas* and have served as faculty advisors for a thesis on racial profiling. Furthermore, Dr. Fritsch has conducted racial profiling training for law enforcement executives at the Institute for Law Enforcement Administration in Plano, Texas.
